

When model hesitates,
humans also struggle

Tonghe Zhuang
Postdoctoral researcher
in Martin's lab

Entropy-based measure of uncertainty

Background

- **Spoerer et al. (2020)** : Correlations between these model-derived RTs and human RTs show that **entropy-based stopping rules** can align network behavior with human speed of decision-making.
- Ma et al., **Memorability shapes perceived time (and vice versa)**
